

Solenoid valves VZWF, force pilot operated, NPT

FESTO

Solenoid valves VZWF, force pilot operated, NPT

FESTO

Key features and overview

Function

Normally closed solenoid valve with diaphragm and forced lifting. When the solenoid is energised, the differential pressure from the secondary side of the diaphragm is reduced via the servo hole. The effective differential pressure lifts

the diaphragm away from the valve seat. If there is no differential pressure, the diaphragm is lifted directly by the solenoid. The valve opens and closes without a differential pressure between the inlet and outlet.

General

-  Connecting thread
1/4 NPT ... 2 NPT
-  Flow rate Kv
1.8 ... 28 m³/h

-  Note

The valves are suitable for vacuum with Pabs > 100 mbar. Please ensure the direction of flow corresponds to the direction of the arrow.

Application

- Suitable for closed applications such as cooling or filling systems
- Vacuum
- Liquid gas
- Bottling systems

Design

- Diaphragm valves
- Forced lifting of the valve diaphragm
- 2/2-way valve, normally closed

Advantages

- Choice of sealing materials for different fields of applications
- Medium pressure 0 bar or higher
